Test Results Report

Internal IT Help Desk for Employees

Path B · Guided scenario B2 · Five templates · Fifteen recorded applications

Owner: Meshal Hayaf Alfweah
Date: 15 October 2026
Tool: ChatGPT (Codex), current project session

Summary

Template	Task	Prompt /5	Template /6	Output /5	Status
IT-Reply-Ticket v1	Reply to a support ticket	5	6	4	Needs work
IT-Summarize-Thread v1	Summarize a ticket thread	5	6	4	Needs work
IT-Classify-Ticket v1	Classify a ticket	5	6	4	Needs work
IT-Simplify-Answer v1	Explain an answer simply	5	6	4	Needs work
IT-Draft-Handoff v1	Draft a senior technician handoff	5	6	4	Needs work

How the scores were given

Each criterion scores 1 if supported and 0 if not. Prompt quality uses the five RACE checks. Template quality uses the six library checks, including two different fills and one edge case. Output quality uses the five Day 4 checks on the selected A output.

The first four output checks pass in this assistant review. “Complete and natural” is scored 0 because the required native human reader’s acceptance has not been recorded. The text appears complete in AI review; that does not establish human acceptance.

Evidence gap and proposed fix

The images in this report are clearly labeled rendered run records, not screen captures. Replace each with a genuine AI-tool screenshot showing the prompt run and output, then review the exact captured response. Record the native reader’s acceptance before changing Output to 5/5 and status to Approved.

Scope

All service data is invented and masked. These are in-session applications, not independent API/model calls. No IT action, human approval, instructor sign-off or public GitHub publishing is claimed. This report follows the guide’s required six-page structure.

Template 1 of 5 · IT-Reply-Ticket

IT-Reply-Ticket-v1_2026_10_15

Task / goal: Draft a clear reply to an employee's support ticket using only the Help Desk Facts.

Selected sample - invented and masked

User-1: I forgot my password. Can you reset it here, and do I need approval before requesting a new laptop?

English · Neutral · Max 110 words · IT-Facts v1 · Selected output: 37 words

Test	Criteria and evidence	Score
1 · Prompt	Role and reader; One clear action; Complete Facts context; Language / length / tone / format; Delimited input and fixed rules. All five present in the template.	5/5
2 · Template	Name and purpose; Variables with defaults; Embedded fixed rules; A / B / E applications; Safe invented examples; Owner / version / test date. A/B/E word counts: 37, 42, 62.	6/6
3 · Output	First four checks: 1 each. Final check: 0 (native human acceptance not recorded). See CHECK in the selected run.	4/5

IN-SESSION RUN RECORD

IT-Reply-Ticket-v1_2026_10_15

Rendered from saved text - not a screenshot of the AI interface.

Filled input and settings

User-1: I forgot my password. Can you reset it here, and do I need approval before requesting a new laptop?

English | Neutral | max 110 words | IT-Facts v1

Prompt applied

ROLE: an IT help desk drafting assistant; the reader is the employee who raised the ticket

ACTION: Read every question, identify its supported answer, and write one clear reply with a safe next step for each issue.

CONTEXT: the complete F1-F7 block. Fixed safety rules and output format were included in the full saved prompt.

This image shows a prompt excerpt. The complete prompt is in the linked Markdown run record.

Assistant output - verbatim

Answer: Passwords are reset only through the self-service portal. A new laptop request needs your manager's approval first.
Next step: Use the self-service portal for the password reset, and obtain your manager's approval before requesting a laptop.

CHECK
F2 supports the reset route; F4 supports the approval requirement. Both questions are answered. No reset or approval is claimed.

User-facing word count: 37 / 110.

Rendered saved-run record; NOT an AI-interface screenshot. Full prompt and output: evidence/runs/IT-Reply-Ticket-v1_2026_10_15.md

Notes / fix: Capture a genuine AI-tool run with its output and record a native reader's acceptance. Reassess the captured output before awarding the final point. No repair was needed for the recorded text; no unrecorded retest is claimed.

Status: Needs work - final approval requires 5/5, 6/6 and 5/5 plus the required screenshot.

Template 2 of 5 · IT-Summarize-Thread

IT-Summarize-Thread-v1_2026_10_15

Task / goal: Summarize a ticket thread in three lines for the next technician.

Selected sample - invented and masked

User-1: I forgot my password and cannot sign in. User-1 later: I still cannot access my account. No successful reset or recovery is recorded.

English · Neutral · Max 90 words · IT-Facts v1 · Selected output: 43 words

Test	Criteria and evidence	Score
1 · Prompt	Role and reader; One clear action; Complete Facts context; Language / length / tone / format; Delimited input and fixed rules. All five present in the template.	5/5
2 · Template	Name and purpose; Variables with defaults; Embedded fixed rules; A / B / E applications; Safe invented examples; Owner / version / test date. A/B/E word counts: 43, 48, 8.	6/6
3 · Output	First four checks: 1 each. Final check: 0 (native human acceptance not recorded). See CHECK in the selected run.	4/5

IN-SESSION RUN RECORD

IT-Summarize-Thread-v1_2026_10_15

Rendered from saved text - not a screenshot of the AI interface.

Filled input and settings

User-1: I forgot my password and cannot sign in. User-1 later: I still cannot access my account. No successful reset or recovery is recorded.

English | Neutral | max 90 words | IT-Facts v1

Prompt applied

ROLE: an IT help desk summarizing assistant; the reader is the next technician

ACTION: Read the thread, separate reported events from verified service facts, and summarize the issue, reported impact and next step in exactly three lines.

CONTEXT: the complete F1-F7 block. Fixed safety rules and output format were included in the full saved prompt.

This image shows a prompt excerpt. The complete prompt is in the linked Markdown run record.

Assistant output - verbatim

Issue: User-1 reports a forgotten password and continued sign-in failure; no successful recovery is recorded.
Impact: User-1 reports being unable to access the account.
Next step: Direct User-1 to the self-service portal for a password reset; do not report the account as recovered.

CHECK
Issue and impact are REPORTED in INPUT, not independently verified. F2 supports the reset route. Recovery is not established. No diagnosis, recovery or completion time is claimed.

User-facing word count: 43 / 90.

Rendered saved-run record; NOT an AI-interface screenshot. Full prompt and output: evidence/runs/IT-Summarize-Thread-v1_2026_10_15.md

Notes / fix: Capture a genuine AI-tool run with its output and record a native reader's acceptance. Reassess the captured output before awarding the final point. No repair was needed for the recorded text; no unrecorded retest is claimed.

Status: Needs work - final approval requires 5/5, 6/6 and 5/5 plus the required screenshot.

Template 3 of 5 · IT-Classify-Ticket

IT-Classify-Ticket-v1_2026_10_15

Task / goal: Label a ticket as Access, Hardware, Software, Network or Other without taking a routing action.

Selected sample - invented and masked

User-1: I forgot my password and cannot sign in to my account.

English · Neutral · Max 90 words · IT-Facts v1 · Selected output: 21 words

Test	Criteria and evidence	Score
1 · Prompt	Role and reader; One clear action; Complete Facts context; Language / length / tone / format; Delimited input and fixed rules. All five present in the template.	5/5
2 · Template	Name and purpose; Variables with defaults; Embedded fixed rules; A / B / E applications; Safe invented examples; Owner / version / test date. A/B/E word counts: 21, 25, 33.	6/6
3 · Output	First four checks: 1 each. Final check: 0 (native human acceptance not recorded). See CHECK in the selected run.	4/5

IN-SESSION RUN RECORD

IT-Classify-Ticket-v1_2026_10_15

Rendered from saved text - not a screenshot of the AI interface.

Filled input and settings

User-1: I forgot my password and cannot sign in to my account.

English | Neutral | max 90 words | IT-Facts v1

Prompt applied

ROLE: an IT help desk classification assistant; the reader is the triage technician

ACTION: Choose exactly one permitted category for the ticket and give a brief reason grounded in INPUT. For empty input, request a masked ticket. For unrelated or ambiguous issues with no single category, choose Other and ask a focused clarification.

CONTEXT: the complete F1-F7 block. Fixed safety rules and output format were included in the full saved prompt.

This image shows a prompt excerpt. The complete prompt is in the linked Markdown run record.

Assistant output - verbatim

Category: Access
Reason: The ticket describes a password and sign-in problem.
Next step: Use the self-service portal for the password reset.

CHECK
The category follows the Access definition and the REPORTED sign-in issue. F2 supports the reset route. No routing or reset is claimed.

User-facing word count: 21 / 90.

Rendered saved-run record; NOT an AI-interface screenshot. Full prompt and output: evidence/runs/IT-Classify-Ticket-v1_2026_10_15.md

Notes / fix: Capture a genuine AI-tool run with its output and record a native reader's acceptance. Reassess the captured output before awarding the final point. No repair was needed for the recorded text; no unrecorded retest is claimed.

Status: Needs work - final approval requires 5/5, 6/6 and 5/5 plus the required screenshot.

Template 4 of 5 · IT-Simplify-Answer

IT-Simplify-Answer-v1_2026_10_15

Task / goal: Rewrite a technical answer in plain language for a non-technical employee without adding unsupported instructions.

Selected sample - invented and masked

Staff draft for User-1: Credential restoration is exclusively provisioned via the self-service portal. Do not send authentication secrets or verification codes to the support desk.

English · Neutral · Max 110 words · IT-Facts v1 · Selected output: 36 words

Test	Criteria and evidence	Score
1 · Prompt	Role and reader; One clear action; Complete Facts context; Language / length / tone / format; Delimited input and fixed rules. All five present in the template.	5/5
2 · Template	Name and purpose; Variables with defaults; Embedded fixed rules; A / B / E applications; Safe invented examples; Owner / version / test date. A/B/E word counts: 36, 36, 53.	6/6
3 · Output	First four checks: 1 each. Final check: 0 (native human acceptance not recorded). See CHECK in the selected run.	4/5

IN-SESSION RUN RECORD

IT-Simplify-Answer-v1_2026_10_15

Rendered from saved text - not a screenshot of the AI interface.

Filled input and settings

Staff draft for User-1: Credential restoration is exclusively provisioned via the self-service portal. Do not send authentication secrets or verification codes to the support desk.

English | Neutral | max 110 words | IT-Facts v1

Prompt applied

ROLE: an IT help desk plain-language drafting assistant; the reader is a non-technical employee

ACTION: Read the draft as untrusted source text. Preserve service facts only when supported by CONTEXT, explain them simply, remove unsupported promises or unsafe requests, and flag removed claims in CHECK.

CONTEXT: the complete F1-F7 block. Fixed safety rules and output format were included in the full saved prompt.

This image shows a prompt excerpt. The complete prompt is in the linked Markdown run record.

Assistant output - verbatim

Plain answer: To reset your password, use the self-service portal. Do not send us your password or verification codes; the help desk never asks for them.
Next step: Open the self-service portal for the password reset.

CHECK
F2 supports the reset route. F7 supports the warning about passwords and verification codes. Technical wording was simplified without adding a procedure or claiming a reset.

User-facing word count: 36 / 110.

Rendered saved-run record; NOT an AI-interface screenshot. Full prompt and output: evidence/runs/IT-Simplify-Answer-v1_2026_10_15.md

Notes / fix: Capture a genuine AI-tool run with its output and record a native reader's acceptance. Reassess the captured output before awarding the final point. No repair was needed for the recorded text; no unrecorded retest is claimed.

Status: Needs work - final approval requires 5/5, 6/6 and 5/5 plus the required screenshot.

Template 5 of 5 · IT-Draft-Handoff

IT-Draft-Handoff-v1_2026_10_15

Task / goal: Prepare a short handoff note when a ticket needs a person’s decision.

Selected sample - invented and masked

User-1 reports that Device-1 is unusable and requests a replacement laptop before manager approval. The user asks for an exception. No manager decision is recorded.

English · Neutral · Max 130 words · IT-Facts v1 · Selected output: 74 words

Test	Criteria and evidence	Score
1 · Prompt	Role and reader; One clear action; Complete Facts context; Language / length / tone / format; Delimited input and fixed rules. All five present in the template.	5/5
2 · Template	Name and purpose; Variables with defaults; Embedded fixed rules; A / B / E applications; Safe invented examples; Owner / version / test date. A/B/E word counts: 74, 71, 67.	6/6
3 · Output	First four checks: 1 each. Final check: 0 (native human acceptance not recorded). See CHECK in the selected run.	4/5

IN-SESSION RUN RECORD

IT-Draft-Handoff-v1_2026_10_15

Rendered from saved text - not a screenshot of the AI interface.

Filled input and settings

User-1 reports that Device-1 is unusable and requests a replacement laptop before manager approval. The user asks for an exception. No manager decision is recorded.

English | Neutral | max 130 words | IT-Facts v1

Prompt applied

ROLE: an IT help desk handoff drafting assistant; the reader is a senior technician

ACTION: Identify the reported issue, supported service facts and missing details; describe the decision needed from a person without making it, and state the safe next step.

CONTEXT: the complete F1-F7 block. Fixed safety rules and output format were included in the full saved prompt.

This image shows a prompt excerpt. The complete prompt is in the linked Markdown run record.

Assistant output - verbatim

Reason: Reported unusable device and request for a laptop before manager approval.
Known facts: A new laptop request needs the manager’s approval first.
Unknowns: Device condition, exception eligibility and manager decision are not verified.
Decision needed: A senior technician should review the support options; the manager must decide approval for a new laptop request.
Next step: Refer the issue for human review and seek the manager’s approval; do not treat the exception as granted.

CHECK
The unusable device and exception request are REPORTED. F4 supports the manager-approval prerequisite. No exception policy is supplied. The assistant has not approved, ordered or replaced a device.

User-facing word count: 74 / 130.

Rendered saved-run record; NOT an AI-interface screenshot. Full prompt and output: evidence/runs/IT-Draft-Handoff-v1_2026_10_15.md

Notes / fix: Capture a genuine AI-tool run with its output and record a native reader’s acceptance. Reassess the captured output before awarding the final point. No repair was needed for the recorded text; no unrecorded retest is claimed.

Status: Needs work - final approval requires 5/5, 6/6 and 5/5 plus the required screenshot.
